

REFERENCE LETTER

Bilten, 12.05.2026

ANAVIA AG specializes in the development, production, and global sales, service & marketing of vertical take-off and landing systems (VTOL) with a maximum take-off weight exceeding 120 kilograms.

Mr. Jorge Benito, born on 15.02.2000 was engaged by ANAVIA AG on a contractual basis as an Electronics Laboratory Engineer on a full-time basis from 10.03.2026 to 22.05.2026 at our facilities in Näfels and Bilten, Canton of Glarus, Switzerland.

During his tenure, **Mr. Benito** was entrusted with the following key responsibilities:

- Designed, assembled, and populated multi-layer PCBs for Power Distribution Units (PDUs) used in medium-sized UAV platforms, including power components such as MOSFETs, current sensing devices, protection elements, and connectors.
- Performed systematic cross-checking of electrical schematics, PCB layouts, and mechanical drawings, ensuring interface consistency and compliance with applicable design rules.
- Reviewed and validated power routing, grounding schemes, and signal integrity considerations, identifying potential design risks such as voltage drops and grounding issues.
- Developed detailed board-level test protocols, including functional verification, power-on sequencing, and voltage/current measurements.
- Conducted electrical and functional testing using laboratory instrumentation (e.g., bench power supplies, electronic loads, and multimeters), documenting results and deviations against specifications.
- Supported troubleshooting and PCB-level fault analysis, isolating issues related to component placement, soldering defects, and design inconsistencies.

Mr. Benito's contractual engagement concluded on **22 May 2026**.

We thank **Mr. Benito** for his contribution and wish him the best for his future professional endeavors.

Kind Regards,

Tino Hermann
